

New Risks

Irrelevant & Sensitive

6.

I&S

Removed Risks

7. Work is ongoing within HO to look at the potential for bringing the content within the 'risks under review' into the existing NRA risks. Risks under review consist of information retained despite the scenario in question not currently meeting the threshold for inclusion on the NRA risk matrix. HO considerations are ongoing as to whether this could be achieved via (e.g.) a range or as alternative examples for similar risks. This could ensure the content within the risks under review is included in a more usefully applicable manner.
8. [See also section 14].

Significant Changes to Risks

9. The DH risk H24 (Emerging Infectious Disease) appears likely to increase in overall impact from 3 to 4. This will put H24 within the red-shaded area of the Risk Matrix alongside such risks as (e.g.) H19 (East Coast Flooding). This indicates a need to consider bespoke contingency planning for H24. The change was largely as a result of revisions to fatality and economic assessments.

Irrelevant & Sensitive

12. Other changes to locations in the risk matrix are expected once scoring begins fully in January.
13. [See also section 5].

Consolidated Risks

¹ 'Actual or threatened significant disruption to the distribution of fuel by road including as a result of industrial action by fuel tanker drivers.'

² 'Actual or threatened significant disruption to fuel supplies as a result of disruption at key refineries/terminals.'
