5,363 → 673v.

PR

- not steep increase / hence of vaccines.
- Contact patterns in children back to normal; adults less so.
- immunity of vaccine important /
∴ booster program.
- Flattish ~~general~~ general & #.
- Long curves of admissions.
- If move to B - be clear what that is.

Name
Redacted

negative view

- winter gap w / pressure on NHS / some warnings on vaccination.

more positive

- children getting immunised
- boosters ✓

→ slower boiling frog.

What point do you decide?

no obvious point to go to "plan B".
