UK: Daily new confirmed COVID-19 cases per 100,000

Explore the Data Sources & Processing Reuse This Work

UK: Daily new confirmed COVID-19 cases per 100,000, Oct 31, 2021

Shown is the rolling 7-day average, by the date a positive specimen is taken, not the date that a case is reported. This lag in processing means the latest data shown is several days behind the current date. Due to limited testing, the number of confirmed cases is lower than the true number of infections.

How we process data at Our World in Data

All data and visualizations on Our World in Data rely on data sourced from one or several original data providers. Preparing this original data involves several processing steps. Depending on the data, this can include standardizing country names and world region definitions, converting units, calculating derived indicators such as per capita measures, as well as adding or adapting metadata such as the name or the description given to an indicator.

At the link below you can find a detailed description of the structure of our data pipeline, including links to all the code used to prepare data across Our World in Data.
